MASCOT FERTILIZERS

Fineturf

A range of high quality conventional release fertilizers for use on golf and bowling greens, tennis courts, ornamental lawns and sportsfields

- Rapid green-up
- Precise control over nutrient inputs
- Dependable nutrient release – even under cool conditions
- Good nutrient retention in soils
- Uniform granule size for even distribution

Fineturf products are ideal for turf managers who prefer conventional fertilizers which give precise control over nutrient inputs during the growing season and achieve a rapid green-up. Each granular formulation is processed in 1-2mm evenly sized homogenous granules which ensure maximum coverage and a quick dependable release of nutrients, even under cool soil temperatures.

Several products in the Fine Turf range contain organic nutrient which complexes with the mineral elements to give a more gradual release of nutrients.
