WHY Fineturf fertilizers

- 1-2.5mm granule size
- Analyses for all seasons
- Some analyses with nitric source of Nitrogen for cooler conditions

Fineturf products are ideal for turf managers who prefer conventional fertilizers which give precise control over nutrient inputs during the growing season and achieve a rapid green-up. The homogenous evenly-sized granules ensure maximum coverage and a quick dependable release of nutrients, even under cool soil temperatures.

Several products in the Fineturf range contain organic nutrient which complexes with the mineral elements to give a more gradual release of nutrients.
