

# MICROCAL

Micro-granulated form of **Calcium Carbonate** for correcting acidic pH imbalances

## How Microcal works

Microcal is a micro-granulated form of Carbonate of Lime, making application a dust-free and simple operation. It helps to re-dress the pH balance in soils that are too acidic.

When experiencing excessive acidic conditions apply Microcal, followed by regular pH tests to ascertain if further applications are required.

**Product Detail**

Pack size: 25 kg  
Pack coverage: 714 sq.m  
RT order code: 0105121/025

**RECOMMENDED PERIOD OF USE**

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----

“ Our main stadium pitch is marked out for our football matches using a transfer wheel machine and Duraline Stadia and Standard points. These give us an excellent bright line and the lasting qualities we require. For the training grounds however, where we have multiple pitches we have four iGO machines that apply Impact XP ready to use spray marker paint. All our staff like these machines, they are easy to use, allow us to apply lines very quickly and though we have trialed other systems we find the Impact system to be the best for our needs. ”

**Steve Winterburn**  
Head Groundsman  
Brighton & Hove Albion Football Club
