

# MICROFLOW-CXS RANGE

Slow release liquid fertilizers

## WHY MICROFLOW-CXS FERTILIZERS

- › Premium range of controlled or conventional release analyses
- › Analyses can be mixed to give the required release pattern
- › Conventional release is a “true foliar”
- › New high P analysis
- › Improved surfactant to maximise leaf and root uptake
- › Fully compatible with RT Speciality Range and Maintain NT

### Methylene Ureas

Long chain molecules are used, which requires microbial action to breakdown, and has minimum scorch risk.

### Plant Sugars

The plant sugar content has been increased to give greater longevity from a true foliar fertilizer. These provide an energy source for the mycorrhizae and rhizosphere bacteria, providing the plant with nitrate and phosphate.

### Trace Elements

These include, Molybdenum, Boron, Zinc, Manganese, Copper and Iron, to improve plant hardiness, root development and the uptake of macro nutrients.

Advanced penetrants in Microflow-CXS allow the nutrients and biostimulants to move through the soil profile

Microflow-CXS is then quickly taken up by the plant roots

### Humates

Humates in Microflow-CXS are derived from Leonardite, a very bioactive form of Humic Acid. This is a highly compressed, natural organic humus that has been further decomposed by microbial organisms. It provides many benefits resulting in improved plant health and growth.
