

# Mascot Systemic

wormcast suppression

Worm cast suppression  
in amenity turf

## WHY Mascot Systemic

- Beneficial non-casting worms are largely unaffected
- Rain or irrigation following application will not reduce effectiveness
- Safe to a wide range of turfgrass species

## How Mascot Systemic works

Its action is primarily via ingestion; there is some growth retardation and an effect on egg production. The major impact is to cause reduced feeding, with plant litter and 'thatch' becoming repellent to the earthworms, resulting in the avoidance of feeding on treated areas.

In this way the beneficial worm species which do not surface feed will largely be unaffected.

## How to use Mascot Systemic

Spray when worms are near the surface e.g. during spring and autumn. Avoid spraying during drought or when the ground is frozen. Aerate compacted soils prior to treatment to aid penetration. Enhanced suppression is obtained if grass is cut prior to application - do not collect clippings from first mowing after treatment.

For best suppression repeat treatment 1 month after initial application.

### APPLICATION RATES

Equipment	Systemic	Water Volume	Area
Power sprayer	4.0 litres	500-1000 litres	1 ha

- **Systemic** can be tank-mixed with approved formulations of chlorpyrifos for Crane Fly control.
- For difficult-to-wet soils tank-mixing with **Sward** will enhance suppression.
- In hard water areas, a water conditioner such as contained in **Trailblazer**, should be used to reduce pH of water.

### RECOMMENDED PERIOD OF USE

### Product

### Detail

Contains: 500g per litre carbendazim  
 MAPP No: 14488  
 Pack size: 5 litres  
 Pack coverage: 12,500 sq.m  
 RT order code: 0632102/05  
 Use plant protection products safely.  
 Always read the label and product information before use.
