

Environmental Information Sheet

BARCLAY GALLUP BIOGRADE AMENITY™ MAPP 17674

A soluble concentrate containing 360 g/l Glyphosate for use only as a horticultural, aquatic, forestry and industrial herbicide.

Maximum application rates & number of applications vary per weed and situation.
Refer to label for details.

Section	Profile
1. Wildlife	Barclay Gallup Biograde Amenity is not classified as harmful to game and wildlife
Birds & Mammals	Barclay Gallup Biograde Amenity shows low toxicity to mammals & birds. It poses a low risk for birds and mammals living and feeding in treated areas.
2. BEES	Barclay Gallup Biograde Amenity is of low toxicity to honeybees.
3. Non target insects and other arthropods	Barclay Gallup Biograde Amenity is harmless to most species commonly found in and around treated fields, including carabid beetles and ground spiders.
4. Aquatic life	Barclay Gallup Biograde Amenity is not considered as harmful to aquatic life, being of low toxicity to fish, aquatic invertebrates and green algae.
5. Soil & Groundwater	Barclay Gallup Biograde Amenity does not accumulate in soil. It is rapidly degraded in soil by soil micro flora, under both aerobic and anaerobic conditions. Barclay Gallup Biograde Amenity is strongly adsorbed to soil. There risk of groundwater contamination Barclay Gallup Biograde Amenity is negligible due to, low mobility, rapid biodegradation in soil, & high adsorption.
Earthworms	Barclay Gallup Biograde Amenity is of low toxicity to earthworms. The risk posed to earthworm populations in or around treated fields is negligible.
Soil Micro- organisms	Barclay Gallup Biograde Amenity has no adverse effects on soil micro flora. It poses a negligible risk to the processes of nutrient recycling in soil.
